SUMMARY

Software developer and manufacturing leader with experience building AI-powered applications, SaaS platforms, automation tools, and industrial troubleshooting solutions. Currently serving as Line Lead of the Wire Prep Department at Molex while completing a Bachelor of Science in Computer Science at Western Governors University. Designed, built, and deployed multiple software products including AI-powered SaaS platforms, manufacturing diagnostic systems, creative content applications, and cloud-based media processing solutions. Combines more than 20 years of manufacturing, technical troubleshooting, and leadership experience with modern software development and AI technologies to create practical business solutions.

EDUCATION

Western Governors University

Bachelor of Science, Computer Science

Expected Graduation: 2027

Lakeland Community College

Multimedia Certificate

2002

EXPERIENCE

Line Lead – Wire Prep Department

2022 – Present

Molex

- Lead daily operations within the Wire Prep Department.
- Support wire-processing and crimping operations in a manufacturing environment.
- Coordinate troubleshooting, workflow management, and quality objectives.
- Train and support production personnel.
- Identify opportunities for process improvement and operational efficiency.

Machine Operator / Forklift Operator

2010 – 2020

PHB Inc.

- Operated manufacturing equipment in a production environment.
- Maintained production quality and safety standards.
- Supported material handling and production operations.
- Developed extensive experience with industrial equipment and troubleshooting.

Interior Communications Electrician

2005 – 2007

United States Navy

- Maintained and repaired shipboard communication and electrical systems.
- Diagnosed and resolved technical equipment issues.
- Developed strong troubleshooting and technical problem-solving skills.
- Worked within highly structured operational environments.

Machine Operator

2000 – 2003

CW Ohio

- Operated production equipment and supported manufacturing operations.
- Maintained quality and safety standards.

PROJECTS

AI Cartoon Studio | Founder & Developer | AI-powered cartoon creation platform that transforms user choices into interactive cartoon adventures through automated storytelling and creative content generation.

- Designed and developed a full-stack web application focused on AI-assisted cartoon creation.
- Built interactive workflows allowing users to create characters, adventures, and story-driven experiences.
- Implemented AI-powered content generation and modern web application architecture.
- Focused on user engagement, accessibility, and rapid content creation.
- Managed application deployment, testing, and iterative product improvements.
- Technologies: Next.js, TypeScript, OpenAI API, Supabase, Tailwind CSS, Vercel

AI Council | Founder & Developer | AI-powered SaaS platform designed to help users plan, organize, and execute projects through specialized AI advisors and persistent project memory.

- Designed and deployed a publicly accessible SaaS platform.
- Implemented user authentication, project management workflows, and subscription billing.
- Integrated OpenAI-powered AI assistance for project planning and execution.
- Developed project memory and context management capabilities.
- Built and maintained a production application hosted in the cloud.
- Technologies: Next.js, Supabase, OpenAI API, Stripe, Vercel

Hanke AI Diagnostic Assistant | Founder & Developer | AI-assisted troubleshooting platform designed to support industrial wire-processing and crimping equipment diagnostics.

- Created a web-based troubleshooting assistant for manufacturing technicians.
- Applied manufacturing and technician expertise to software design.
- Developed machine-specific diagnostic workflows and support tools.
- Built both a public web prototype and a Microsoft Power Apps implementation.
- Focused on improving troubleshooting efficiency and knowledge retention.
- Technologies: React, OpenAI API, Power Apps, Microsoft Teams, SharePoint, Vercel

432Hz Resonance | Founder & Developer | Cloud-based audio processing application that converts uploaded audio files from 440Hz tuning to 432Hz tuning.

- Implemented file upload, processing, storage, and playback workflows.
- Utilized cloud services for automated audio conversion.
- Developed user authentication and file management functionality.
- Managed end-to-end application deployment and testing.
- Technologies: FlutterFlow, Firebase Authentication, Firestore, Firebase Storage, Google Cloud Run, FFmpeg

TECHNICAL SKILLS

Next.js

TypeScript

JavaScript

React

Tailwind CSS

OpenAI API

AI Application Development

SaaS Platforms

Product Development

Supabase

PostgreSQL

Firebase

Firestore

Cloud Run

Stripe

REST APIs

Git
GitHub
Vercel
FlutterFlow
Power Apps
Microsoft Teams
SharePoint
